Intakes.xlsx

The travel times for the Spill are estimated using 4 mph in Green. The calculated travel times I used are twice the 4 mph estimate (slower than the 4 mph estimate).

Subject: Map of Intakes and Stream Gages

Here is the map of the intakes and gages on the Animas and San Juan. I will work up some travel times before I leave today, but NM or USGS may already have some idea. There is an application called ICWATERS co-developed by the EPA which should give a good estimate of concentration and instream flow time, but I do not currently have access to the software. HQ might be able to help in getting this if it is needed.

I will start working from home tomorrow about 6:30 am. My Cell number is Personal Phone/Ex. 6
Also Angel Kosfiszer will be in the Office to assist with this as well if needed.

Thanks!
